UNIVERSITY RADIOLOGY
Leaders in Subspecialty Imaging

Every day without progression is a VICTORY.

Pluvicto Now Available at Our Nutley Imaging Office

University Radiology now offers Pluvicto, an advanced treatment for men with PSMA-positive metastatic castration-resistant prostate cancer (mCRPC).

Pluvicto is a type of radioligand therapy (RLT)—a targeted form of radiation treatment designed to attach to the PSMA biomarker found on prostate cancer cells. This allows the therapy to deliver radiation directly to the cancer, while minimizing impact on healthy tissue.

Benefits seen in clinical trials:

- **2x longer time without cancer worsening** compared to standard therapy
- **Improved overall survival** vs. patients who received another hormone therapy
- **49% of men experienced tumor shrinkage or disappearance**

Treatment plan: 6 doses total • Given once every 6 weeks

Scheduling and coverage: Transportation available upon request. Financial assistance resources may be available for some patients.

Pluvicto is helping men with prostate cancer live longer, with a better quality of life.

Schedule by phone: 973-922-8181
Office hours: 7:00am - 3:30pm Monday-Friday
235 Franklin Avenue • Nutley, NJ 07110 • 973-922-8181 • 973-235-1010 (F)
