Dynamic Pelvic Floor MRI for Incontinence / Pelvic Floor Disorders

DESCRIPTION / BENEFIT

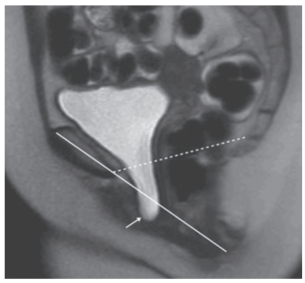

Pelvic Floor MR images show in exquisite detail the posterior, middle and anterior compartments of the pelvis without using ionizing radiation.

Dynamic Pelvic Floor imaging provides physiologic information by imaging during strain and at rest.

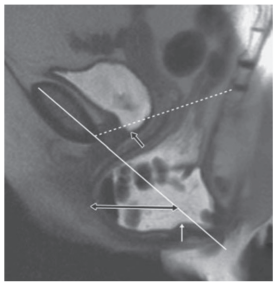

During the exam a moderate amount of imaging gel is placed into the rectal cavity. No IV contrast is used for this exam. It provides an anatomic guide for possible surgical intervention and treatment.

High resolution images are created in multiple orthogonal planes:

MODERATE CYSTOCELE

ANTERIOR RECTOCELE

INDICATIONS

Indications for this exam include: urinary or fecal incontinence, chronic constipation, incomplete defecation, pelvic floor prolapse, procidentia, and post surgical recurrence of signs and symptoms of pelvic floor dysfunction.

PRESCRIBING INFORMATION

Specify: Dynamic Pelvic Floor MRI
When ordering please use CPT 72195 – MRI Pelvis no Contrast

PREPARATION

We ask that the patient place an over the counter Fleet enema one hour prior to leaving their home to reduce colonic air and fecal matter. Total exam time is approximately 30-40 minutes. No fasting is necessary.

Exam can be scheduled by calling 732.390.0033
